## DETAILED ACTION

### ***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-8 are rejected under 35 U.S.C. 102(b) as being anticipated by Roberts (US 1,927,849).

Roberts discloses that it is old and well known to have a spreader roll for use on web of material to be splayed, the spreader roll comprising: a bowed shaft (12, 13); a bowed cylindrical outer surface (7, 8, 9) comprising a plurality of cylinder elements axially aligned along the shaft wherein each of the elements including an outer surface and at least one end portion having a nonlinear profile (11); and whereby the splayed web is intermittently supported by at least one of the plurality of cylindrical elements at the nonlinear profile.

For claims 2 & 16, note that Roberts's nonlinear profile of adjacent ones of the cylinder elements are arranged in mating relationship and/or arranged to interlock with adjacent roll segments.

For claims 3 & 7, note that Roberts's nonlinear profile defines a generally sine wave configuration (see Figure 3).

For claims 4 & 8, note that Roberts's sine wave configuration includes flattened areas (see Figure 3).

For claims 5 & 9, note that Roberts's sine wave configuration includes tessellated, partially mosaic flattened areas (see Figure 3).

For claims 11 & 12, note that Roberts's nonlinear profile end edge profiles are arranged to intermesh with adjacent roll segments and are substantially sinusoidal (see Figure 3).

For claims 13 & 17, note that Roberts's sinusoidal edge profile includes at least one flattened area (see Figure 3).

For claims 14 & 18, note that Roberts's substantially sinusoidal edge profile includes tessellated, partially mosaic flattened areas (see Figure 3).

### ***Response to Arguments***

3. Applicant's arguments filed 7/28/03 have been fully considered but they are not persuasive.

### ***Conclusion***

4. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not

Art Unit: 3644

mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
